TECHNICAL SKILLS

Languages

[Python](#) [SQL](#) [Java](#)
[JavaScript](#)

Frameworks

[Django](#) [FastAPI](#)
[REST APIs](#) [AsyncIO](#)

Databases

[PostgreSQL](#) [MySQL](#)
[Redis](#) [ORM](#)

Architecture

[Microservices](#) [RBAC](#)
[Async](#) [Event-Driven](#)

Cloud & DevOps

[Docker](#) [Linux](#) [AWS](#)
[Git](#) [GitHub](#) [CI/CD](#)

AI & Tools

[GenAI APIs](#) [Prompt Eng.](#)
[Copilot](#) [Agile](#) [SDLC](#)

CERTIFICATIONS

AWS Cloud Practitioner

KodeKloud Academy
May 2026

Python Essentials 1 & 2

Cisco / Python Institute
May 2026

Prompt Engineering

Microsoft & Simplilearn

CLM — Conversational AI

Microsoft Education

AI Aware & AI Appreciate

Intel & Digital India
Feb 2026

Cybersecurity Simulation

Deloitte & Mastercard

EDUCATION

BCA — Bachelor of Computer Applications

RDG Women's College

Results-driven **Python Backend Developer** with expertise in **Django**, **FastAPI** and **RESTful API design**. Proven ability to architect high-concurrency, event-driven backend systems achieving **35% throughput improvement** and **99.9% uptime** under peak load. Experienced in microservices architecture, **PostgreSQL optimization**, **Docker containerization**, and **Generative AI integrations**. AWS Certified. Currently pursuing **BCA (Bachelor of Computer Applications)** from Sant Gadge Baba Amravati University (2026). Seeking to build scalable, enterprise-grade Python backends.

PROFESSIONAL EXPERIENCE

Python Development Trainee

Jun – Jul 2025

[Base Electrosoft LLP · Pune](#)

- Engineered optimised **Django/FastAPI** backend configurations under senior architect mentorship
- Debugged complex logical errors across multi-module Python systems in agile sprints
- Authored clean, maintainable Python code following OOP principles and REST design standards

Android & IoT Developer Intern — 150 Hours

Jun 2025

[Base Electrosoft LLP · Pune](#)

- Integrated multi-tier architectures combining Android frontend interfaces with IoT hardware backends
- Delivered end-to-end feature implementations across hardware and software layers

Advanced Software Engineering Simulation

Jan 2026

[Walmart Global Tech \(Forage\)](#)

- Architected enterprise-scale Python backends, optimising relational schemas for high-throughput data operations
- Applied advanced Data Structures to eliminate scaling bottlenecks in distributed backend systems

Software Engineering Simulation

Sept 2025

[JPMorgan Chase & Co. \(Forage\)](#)

- Deployed real-time financial data feed backend components with live visualisation integration
- Resolved critical Python framework conflicts in simulated trading platform environment

KEY PROJECTS

⚡ High-Concurrency Real-Time Data Engine

Python · FastAPI · AsyncIO · PostgreSQL · Redis · Docker
[github.com/kalyaninemadework-pixel/realtime-data-engine](#)

- **Architecture:** Designed fully async, event-driven Python backend using FastAPI + AsyncIO — non-blocking I/O across all data pipelines
- **Performance:** Optimised PostgreSQL connection pools (min=10, max=50), eliminated framework deadlocks, implemented query batching — achieving **35% throughput improvement**
- **Containerized:** Dockerized with docker-compose — one-command deployment of API + PostgreSQL + Redis
- **Reliability:** Decoupled background worker queues sustained **99.9% uptime**; sub-10ms avg API response via Redis caching

✅ 35% Throughput · Sub-10ms Response · 99.9% Uptime

🛒 Microservices E-Commerce Ecosystem

Python · Django · FastAPI · PostgreSQL · REST APIs · Redis · Docker · Nginx · RBAC
[github.com/kalyaninemadework-pixel/ecommerce-microservices](#)

- **Decomposition:** Monolithic Django app decomposed into **5 independently deployable services** — Products, Inventory, Orders, Payments, Auth
- **API Design:** Clean versioned RESTful APIs per service with strict contracts — enabling independent deployment and testing
- **Data Isolation:** Per-service PostgreSQL schemas eliminating data coupling and single-point-of-failure risks
- **Security:** RBAC enforced at Nginx API gateway layer across all 5 services; idempotency keys on Payment endpoints preventing zero data collisions
- **DevOps:** Containerized with Docker Compose + Nginx Gateway — docker compose up starts entire ecosystem

✅ Zero Data Collisions · 100% Service Independence · Production-Ready
